LIMESTONE

RIDGESTONE

Please note that the Kodah fire pits in the images above are shown with a gas insert upgrade and 3 tiers. LEE Building Products supplies Kodah fire pits in 2 tier kits. Adding more tiers will be an additional charge.

## FEATURES:

- Modern, linear proportions
- Freshly quarried stone texture complements a variety of applications
- Fast installation with large blocks and perfectly planned kits
- Kit consists of 2 tiers (16 blocks) and heavy-duty 14-gauge steel fire ring

## INSTALLATION INSTRUCTIONS:

1. Familiarize yourself with the construction details shown in this sheet.
2. Mark out a 5-ft x 5-ft square at the location for your fire pit.
3. Excavate for drain stone base (min. 6").
4. Fill excavation with drain stone. Level and compact the stone.
5. Place blocks per the construction details shown on this sheet. Ensure that the base course is level before stacking the second course. (The use of polyurethane concrete adhesive between courses is optional.)
6. Once the blocks are placed, set the steel liner in the center of the fire pit, with the lip resting directly atop the block.
7. Add additional drain stone to the center of the fire pit until the stone covers the bottom (1) inch of the steel liner. This will secure the liner in place.

WARNING! Do not place the fire pit directly atop a patio surface. Instead, the fire pit should be "cut in" to the patio surface to avoid damage to the patio caused by conductive heat transfer.

IMPORTANT NOTE: Burning large items or trash in fire pits may cause damage to block units. Our fire features are designed strictly for small campfires. We recommend using a steel insert to protect block and coping units. Failure to use an insert could cause damage to the block or coping.

Actual product color may vary. We recommend reviewing product samples before making final color selections.
